

Agriculture Department

The digital transformation of seed distribution process and using of this data for input subsidy and crop insurance settlements, without manual intervention.

(Data Mining for Agriculture – collect and use Granular farm and farmer data)

To digitize the seed distribution process between the farmer and the source and hence reduce the manual intervention to promote transparency, optimization, and ease of business in the system. Also, the data mined with the help of the above system should be able to facilitate input subsidy and crop insurance settlements.

Details:

1. Details on the current Process and gaps, possible sources of data collection
2. Are they looking for hardware implementation for data collection - do they require a digital platform
3. Any recent attempts and challenges faced
